

HASA STAIN-OUT

PREVENTS FUTURE STAINS FROM FORMING ON POOL WALLS
REMOVES STAINS FROM POOL WALL

DIRECTIONS FOR USE:

Add one quart of **HASA STAIN-OUT** for pools up to 20,000 gallons. This will neutralize the metallic ions of magnesium, iron, copper, and scale in pool water – to remove and prevent stains. For severe stains, pour in water directly over affected area. **HASA STAIN-OUT** will remove and help prevent stains for six months or more. Swimming can be resumed immediately after applying.

IMPORTANT: for preventative maintenance.

Add 8 ounces per 10,000 gallons of water once a week, to treat fresh water being added to the pool during normal maintenance. Maintain proper pH adjustment.

After acid washing your pool or whenever filling with new water, add **HASA STAIN-OUT**. This will keep the plaster walls of the pool stain free and sparkling. This is the best product available for preventing or removing stains. However, it is not unconditionally guaranteed, since it is impossible to foresee all water and surface conditions in a swimming pool.

May be used for all types of swimming pool finishes; fiberglass, vinyl, white or colored plaster, etc.

AVAILABLE PACKAGING:

HASA STAIN-OUT is available in convenient one quart bottles.
