

HASA SUPER STAIN-OUT

PREVENTS STAINS FROM FORMING – REMOVES STAINS FROM POOL WALLS

HASA SUPER STAIN-OUT is primarily used to prevent staining which can occur whenever fresh water is added to swimming pools. Fresh water supplies typically contain some stain causing contaminants including metals such as iron and copper as well as calcium which builds up to lock in discolorations under scale. When **HASA SUPER STAIN-OUT** is added along with fresh water, it will hold these potential stain causing particles in suspension to inhibit stain and scale formation on pool wall, floor and tile surfaces. **HASA SUPER STAIN-OUT** can also remove existing surface staining. However, once stains are formed removal efforts may not be as successful as preventative methods would have been.

DIRECTIONS FOR USE:

Use **HASA SUPER STAIN-OUT** as soon as fill water begins flowing into newly plastered pools, replasters, after acid washing or whenever pool water is drained and pool is refilled.

FOR INITIAL PREVENTATIVE OR REMOVAL TREATMENT:

Add one quart **HASA SUPER STAIN-OUT** for pools up to 40,000 gallons. **HASA SUPER STAIN-OUT** will help prevent stains for six months or more.

FOR CONTINUING MAINTENANCE:

Add 4 ounces of **HASA SUPER STAIN-OUT** per 10,000 gallons of water weekly. Maintain proper pH adjustment. Swimming is permitted immediately after application.

FOR SEVERE EXISTING STAINS:

Pour **HASA SUPER STAIN-OUT** directly over the affected area. Double dosages are permitted in extreme circumstances.

AVAILABLE PACKAGING:

HASA SUPER STAIN-OUT is available in one quart bottles.
