

Black Algae spots can be tough to get at, especially when it is on the bottom of the deep end of the pool. HASA Algi-ban® will do the trick, but if you want to make sure that you get the Hasa Algi-ban® directly where its needed, you can use a telepole or a long piece of PVC pipe. Just put the pipe in the pool, pour a small amount of Algi-ban® down the pipe, and direct it to the spot. Rinse the pole or pipe after application.
