

When treating your pool with HASA Algi-control® to kill gross green and yellow algae, it is best to treat the water at the end of the day or early evening. Simply add Algi-control® along the pool edges, leave the filter running over night, then clean or backwash the filter the following day. This should be enough to eliminate the algae and prevent other algae growth. For even more effective cleaning power add one gallon of Algi-control® and follow it up with four gallons of HASA Sani-chlor®.
