

HI-TEMP SPA CLARIFIER

ACCELERATES FILTRATION AND PROMOTES WATER BRILLIANCE

HASA HI-TEMP SPA CLARIFIER causes tiny particles of debris in spa water to coagulate (join together) so that they may be readily removed from the water by the filter. The brilliance and clarity of spa water depend on the efficient activity of the filter as well as the chemicals used to sanitize the water. It is recommended that your filter cartridge or element be cleaned in **HASA Hi-Temp Spa Filter Soak** on a routine basis, frequency depending upon the use of the spa. **HASA HI-TEMP SPA CLARIFIER** may be used in any fiberglass, vinyl, plaster, tile, or acrylic spa.

DIRECTIONS FOR USE:

Prevention:

Initial dosage with fresh water. Turn on air blower only, add one ounce **HASA HI-TEMP SPA CLARIFIER** for each 400 gallons of spa water. (Two caps full of **HASA HI-TEMP SPA CLARIFIER** equals one ounce). Run blower ten minutes, then run filter equipment for one hour. For best results, test and adjust chlorine reading to 1.0-1.5 ppm and balance pH to 7.6-7.8.

Maintenance:

Repeat dosage twice each week, or sooner if water appears cloudy.

Spa may be used immediately after application.

Proper spa maintenance includes changing spa water. For an estimate of proper water life follow the formula below:

Divide the gallons in your spa by 3 times the average number of bathers per day.

Example: 375 gallon spa – 1 person x 3 = 3

375/3=125 (change water every 125 days)

AVAILABLE PACKAGING:

HASA HI-TEMP SPA CLARIFIER is available in one pint and one quart sizes.
